A Certificate Course in Tablet Manufacturing Technology

Description of Course

Drug manufacturing is the process of industrial-scale synthesis of **pharmaceutical** drugs as part of the **pharmaceutical industry**. The process of **drug manufacturing** can be broken down into a series of unit operations, such as milling, granulation, coating, tablet pressing, and others.

The design and manufacture of pharmaceutical tablets is a complex multi-stage process whereby formulation scientists ensure that the correct amount of drug substance in the right form is delivered at the appropriate time, at the proper rate and in the desired location with its chemical integrity protected to that point. Most drug substances do not possess the required properties which give satisfactory flow from the hopper to the die cavity of tablet presses. As a result, they are subjected to pre-treatment either alone or in combination with suitable excipients to form free-flowing granules that lend themselves to tableting.
